Why Every Insurance Broker Needs a CyberProfiler Scan

CyberProfiler: Your External Vulnerability Scan

See What Hackers See Before They Strike.

Imagine waking up tomorrow to a clear summary of how your business appears to cybercriminals from publicly available sources – and how they could use it to plan an attack.

Delivered safely within 24 hours – no subscriptions, no system access required.

[Buy your vulnerability scan now](#)

- One-time purchase
- No subscriptions
- Secure report delivered within 24 hours
- 50% discount for returning customers

What Is CyberProfiler?

CyberProfiler gives you an **Attacker's Eye View™** of your digital footprint – revealing the same public-facing weaknesses that criminals look for when planning an attack.

This includes exposure points that could lead to:

- Phishing (e.g., fake emails using your domain)
- Ransomware deployment
- Business Email Compromise (BEC)
- Domain impersonation or fraud

The scan is **completely safe**, uses **Open-Source Intelligence (OSINT)** only, and requires no access to your systems.

You receive a **clear, actionable report** – delivered within 24 hours.

Why Brokers Are Prime Targets?

Insurance brokers sit on **high-value data** – client identities, financial records, and policy information. That makes you a magnet for cybercriminals.

With remote work, multiple email domains, and evolving systems, it's easy to miss digital exposures that attackers look for. And increasingly, **insurers and regulators expect more** – especially from licensed FSPs.

Ignorance is no longer a defence. Being proactive is now part of being compliant.

CyberProfiler helps you demonstrate that you're taking meaningful steps to reduce cyber risk – and protect everyone connected to your ecosystem.

What Could Be Exposed?

Most businesses are surprised by how much is publicly visible – even if they don't have a website. Think:

- Forgotten or unmonitored domains
- Email vulnerabilities that allow spoofing
- Old server setups or expired certificates
- Overshared data or digital traces that could help attackers find a way in

If CyberProfiler can see it, so can hackers.

Trusted by Industry Professionals

"CyberProfiler has been a game-changer - it's transformed how we approach cybersecurity, giving us peace of mind and a clear roadmap." — Ismail Yusuf, IT Manager, **AC&E Group of Companies**

"The process was seamless, and within minutes we had a clear report highlighting our online risks. It's a fast, efficient way to keep your digital security up to standard." — Blake Dyason, Founder, **The Insurance Directory**

"CyberProfiler delivered a detailed, easy-to-understand report that uncovered risks we hadn't seen. It gave us the critical insights we needed to strengthen our security posture." — Chris Vancoillie, Systems Engineer, **LightSpeed**

"We use CyberProfiler to quickly assess client risk - especially when onboarding or reviewing changes. The reports are in-depth, professional, and easy to present to clients." — Heinrich de Jongh, Managing Director, **IT in a Box**

Why This Matters for Brokers

Cyber threats don't just impact IT - they affect your operations, reputation, client trust, and compliance exposure. And increasingly, they extend through your entire supply chain.

A single weak point can be enough to cause damage.

CyberProfiler gives you a fast, credible way to:

- Show insurers and compliance officers you're proactively managing digital risk
- Protect your business reputation with visibility into your online footprint
- Strengthen your security posture without complexity or recurring financial commitments
- Support regulatory compliance with a clear record of proactive mitigation

If you care about protecting your clients, you also need to protect their exposure to you. In today's interconnected world, you might be your client's biggest risk vector - and not even know it. **A vulnerability scan is the most basic step in cyber risk reduction - and yet, it's one most businesses still skip.**

CyberProfiler lets you close that gap, fast.

Trusted Technology, Proven Partner

CyberProfiler is developed and operated by **STORM Guidance**, a UK-based cybersecurity firm trusted by insurers, underwriters, and regulated businesses worldwide.

With decades of experience, STORM's team has helped organisations remediate risks before they led to ransomware, phishing, or Business Email Compromise (BEC).

- ISO 27001:2017 and ISO 9001:2015 certified
- An approved UK NCSC Cyber Incident Response provider
- A trusted partner to QBE Insurance Group, which rolled out CyberProfiler across its European operations

You're not just getting a scan. You're getting serious expertise - built for real-world risk.

Ready When You Are

Cyber threats move fast. So do we.

Whether this is your first scan or your fifth, CyberProfiler gives you a fast, credible snapshot of what's visible to attackers - no subscriptions, no delays, no fuss.

Trusted by underwriters, insurers, and IT professionals alike, it's one of the simplest ways to demonstrate that you take cybersecurity seriously.

[Buy your vulnerability scan now](#)

You'll get access to your report within 24 hours - clear, secure, and yours to act on.
